What did we *learn* from the cloud assignment?

*Question*

What did we *learn* from the cloud assignment?

*Answer*

Cloud development is *painful*?

# How can we make this *less* painful?
*Some ideas*

1. Gain confidence through *testing*
2. *Automate* what you're repeating
3. *Tighten feedback loop* as much as possible
4. *Log and monitor* what you can

§ *Testing*

*The testing elephant in the room*

# Test-driven development

[Marsner, 2019]

*What do you primarily get from TDD?*

1. Regression tests (confidence)

*What do you primarily get from TDD?*

1. Regression tests (confidence)
2. Small isolated components

# Do you have to use TDD to get these benefits?

Do you have to use TDD to get these benefits?

No.

Do you have to use TDD to get these benefits?

No. But it can make it easier.

# When should you write a test?

*Question*

When should you write a test?

*Answer*

Whenever you are manually checking something often.

- Checking the endpoints your API.

- Checking the endpoints your API.
- Checking a feature in the frontend of your interface.

# § Automation

- Running tests.

- Running tests.
- Starting locally and running tests locally.

- Running tests.
- Starting locally and running tests locally.
- Deployment (`deploy.sh`).

- Running tests.
- Starting locally and running tests locally.
- Deployment (`deploy.sh`).
- Deployment and running tests.

*Tighten feedback loop* as much as possible

# § Feedback Loops

- Containers

- Containers
- Local database (docker-compose)

*Examples*

- Containers
- Local database (docker-compose)
- Local cloud services (e.g. S3)

*Log and monitor* what you can

# § Log and Monitor

Refer to week 9 content

*Tip*

# Enable CloudWatch on EC2

# Environment variables
